

## **Survey: Do you believe UFO's with extra-terrestrials are real?**

### **Yes– 54%**

“We are not the only living life forms. We do not live on the only planet. I believe they are out exploring outer-space and other planets just like humans.”

“I can't believe we are the only life in the universe. But I am not sure I believe that we actually have visitors from outer space.”

“My father and I saw something that we could not explain and we lived near 2 military installations, one Army and the other was Air Force. We never heard anything about our sighting.”

“Too much ancient evidence, so many people have had sightings and how can anyone think that we are the only ones out there. I met a third grade teacher at a "night of stars" function on the field, lots of telescopes and teachers, and everyone got to look at the heavens. This teacher told me of her abduction in detail, what the beings did with her and what they looked like, reptilian and hard to look at. Other captives were there with her, chilling and unforgettable for me.”

“Why wouldn't there be life forms from other planets????”

“Yes, but my only question is why have they not landed and made their presence known to a large population?”

“Why would we think that there is no one in the Universe more advanced than we are?”

“They are real because we can see them.”

### **No – 45%**

“UFO's are myth with intrigue and are great scoop for bedtime stories, movies, headlines and federal funding.”

“I have never seen one, so I don't believe.”

“Do I believe in unidentified objects, flying and otherwise? Of course; the earth is full of things we don't understand. Do I identify them as alien spacecraft? No.”

“Given the size of the universe, it seems unlikely that life, intelligent or otherwise, does not exist somewhere outside our solar system. However, it seems very unlikely that any advanced cultures have secretly visited our planet.”

“There are lots of things flying around up there that we can't identify from the ground, but they are man made, not the product of ET.”

“Many flying object are unknown to the viewer and could thus be called UFOs but that does not mean they have an extraterrestrial origin.”

“You'd think after all these years of UFOs reportedly being spotted; if they were real we would have actually seen some of the little fellows. There would have been confirmation for the public.”

“I do believe that intelligent life exists somewhere in the universe, but find it hard to believe that a highly advanced civilization would travel this far and then try to remain unknown. What would be the point?”

“Delusions.”

“I'll be a skeptic until one lands on my front lawn.”

**Yes- 54%**

“I do not necessarily believe in flying saucers or human abductions but I also am not arrogant enough to believe that we're the only life form that exists in our extraordinarily vast universe.”

“Y'all haven't defined what you mean by UFO. An object in the sky apparently moving of its own volition is unidentified until you can identify it, if at all. Now, if you mean visiting vessels from civilizations not of this earth my answer is: maybe.”

“And I practice saying every night after my prayers, ‘klaatu barada nikto.’” (phrase from the film, *The Day the Earth Stood Still*).

**No - 45%**

“If it's not a total optical illusion, it's probably something normal that looks abnormal due in part to lighting conditions &/or the frame of mind of the viewer.”

“Provided you mean from outer space. If they were from outer space there would have been an event by now that was unequivocal and widely known. They may be US Government "secret" tests.”

“There are flying objects that are unidentified to some. However, we are not being visited by other non-human people.”

“I believe that we may see objects that are flying that we do not know the identity of (but the military or someone does). I do not believe in flying saucers with alien beings on them.”

“It would be impossible for anyone from a livable planet to fly to earth within a reasonable time period at a reasonable speed. However, I do think it's probable that life exists elsewhere in the universe.”

“No - Although I don't think we are the only ones in the galaxy.”

“All the "proofs" seem hokey. It is fun to speculate, but I doubt there has been any real contact or appearance.”
